

ONE SERVER HOSTING VIRTUAL PRIVATE SERVERS

WWW.ONESERVERHOSTING.COM/VPS

One Server Hosting Virtual Private Servers are the ideal solution for businesses looking for an affordable hosted server solution without an investment in personnel or equipment. Virtual Private Servers (VPS) provide you with the freedom and scalability of your own server, but without the expense, allowing you to take full advantage of cutting-edge technology at a fraction of the price. Free up your business resources and maintain performance and security with a One Server Hosting Virtual Private Server.

WHAT IS A VPS?

Virtual Private Servers are virtualized environments hosted on a single, robust, physical server, which has been divided into multiple, independent virtual servers. Each VPS utilizes its own dedicated amount of bandwidth, disk space, RAM and CPU resources allocated from the main physical server. One Server Hosting Virtual Private Servers offer you root access independent from other virtual servers, allowing you to install and configure your own custom applications, change ownership of files and directories, stop and start services and reboot your server.

Virtual Private Servers are most widely used by businesses and individuals looking for an inexpensive customizable platform to solve their needs. VPS environments distribute the costs of network infrastructure and connectivity, server hardware and system management and maintenance across multiple business customers. The cost distribution lowers the overall price for you, while still offering the same power and security of dedicated server resources.

VPS configurations are used for a wide range of solutions including:

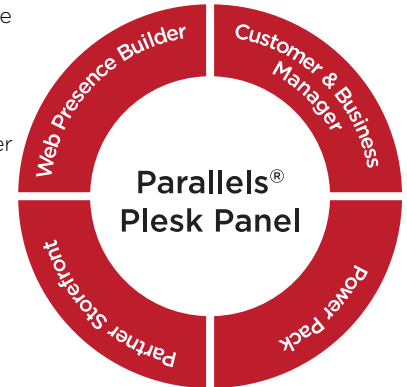

- Multiple Web Site and/or Database Deployments
- Custom Corporate Email Servers
- Unique FTP Servers
- Management, Development and Test Environments
- Off-Site Backup of Business Data or Content
- Centralized Business Desktop Management
- An External DNS Server
- Many More

ONE SERVER HOSTING VPS ADVANTAGES

One Server Hosting Virtual Private Servers are perfect for businesses looking for more control, flexibility and performance than our "shared" web hosting options, but without the investment required for a dedicated server. One Server Hosting VPS plans provide a mid range option for businesses and individuals looking for an economical solution to meet their growing hosting needs. We have carefully designed multiple VPS configurations to best match the needs of today's expanding business requirements. In addition to all the benefits a VPS offers, every One Server Hosting Virtual Private Server solution includes several additional features that give customers added flexibility.

YOU HAVE COMPLETE CONTROL

One Server Hosting has put the power to control your entire server environment in your hands via a robust control and management panel. One Server Hosting has also made it easy to have multiple IP addresses allocated to you for use on your VPS through our online setup and ordering process. You can install any third party, open source, or commercial applications as you get full root access, including SSH access, on every One Server Hosting VPS.

BACKUPS AND RESTORES

One Server Hosting has made backing up your virtual server easy via the included control panel. With a few clicks your environment is safely backed up. Restoring a virtual server to the initial configuration is just as easy, should your VPS become unusable.

NETWORK CONNECTIVITY & INFRASTRUCTURE

Choosing a One Server Hosting VPS solution gives you the added advantage of One Server Hosting's redundant gigabit connections to multiple Internet backbone providers. In addition, One Server Hosting's network operations center monitors all network and server processes and connections 24/7/365 in case of an emergency. One Server Hosting's VPS server hardware is located in one of our three enterprise class data centers, supplying the best environment possible for the hardware hosting your VPS.

FUTURE GROWTH

We have over 20 years of experience as a full service Internet Service Provider and are one of the largest privately owned providers in the northwest United States. No matter how your technology needs evolve, One Server Hosting can offer you the right solution.

INTUITIVE CONTROL PANEL

One Server Hosting features a comprehensive control panel solution used worldwide for Virtual Private Servers and Shared Hosting. The control panel is designed to simplify the management and administration of web sites. Our solution automates a large number of tasks allowing you to reduce operating costs, while at the same time increase profitability and efficiency.

MOST SECURE

New security measures have been implemented offering an improvement over previous Parallels® Plesk® Panel versions. The software's redesigned subsystem improves overall system security providing additional security for your business.

ONE SERVER HOSTING VIRTUAL PRIVATE SERVERS

WWW.ONESERVERHOSTING.COM/VPS

The control panel offers three login levels with each level having its appropriate roles and responsibilities.

Client/Reseller

Second-tier login account where the users are given a login account that gives users domain creation rights. Clients can administer to groups of domains using a single login.

Domain Owner

These are individual domain owner accounts with predetermined permission sets and interface for single domain administration.

Mail User

This is the individual mail account, which allows the user to log in to their own private interface and manage passwords, spam filters, anti-virus settings and much more.

EXTENSIVE PLATFORM SUPPORT

The Parallels Panel powered control panel has many features, skins, application packs, language packs and documentation that allow your business to easily manage your Internet operations. Supported Operating Systems are SuSE, Fedora Core 5, CentOS and Ubuntu.

INNOVATIVE EASE OF USE

Take advantage of the intuitive and attractive interface that is easy for you to understand and is now task oriented and fully customizable. The control panel comes with many additional skins and even gives you the ability to design your own custom skins and manage them in the browser-based interface.

HIGHEST STABILITY

Our solution is specifically designed to be the most stable and secure control panel available, which helps streamline your business processes. The control panel has managed five million plus domains globally and can support thousands of accounts per server to maximize profitability for your business.

VPS MANAGEMENT HELP

Concerned that running your own server, even a virtual one, may be too much to handle? One Server Hosting has available VPS management options to customers in case you get into a bind and don't know exactly how to get out. A Managed VPS is just an additional \$25 a month and includes monitoring of up to five service/data points and a half hour per month of admin assistance during regular hours. If you need more help, additional hours of admin assistance are just \$100 per hour when management is part of your VPS. This is a great option and a great price if you need a VPS guru's help from time to time.
